

# Food ordering site

## 1. Introduction

- My website is a food ordering site in which you can see variety of food. And I will include tab-pills, nav bar, forms etc.
- The purpose of my website is to make user interface easy and clean.

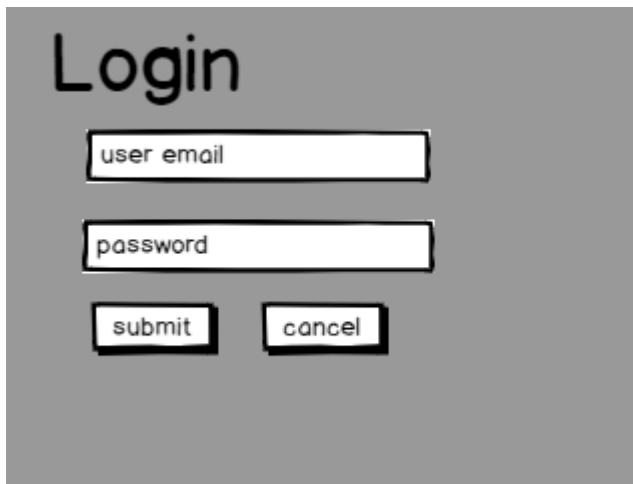

## 2. User Interface Design and Prototype

- My prototype includes all the feature that I will make such as navbar, card, images, button etc.

### 3. Navigation Structure

- My website includes login and sign up and there is add to cart option and for all these I use bootstrap modal. And my website is single page website in which you don't need to go other page all thing will be done in one-page bootstrap modal class.
- Example : when you click on login this login module open

### 4. Reference

- For prototype
  - i. <https://balsamiq.cloud/>
- For ui design
  - i. <https://getbootstrap.com/>
